## SECTION 12: Ecological information

### 12.1 Toxicity

- Toxicity to fish: no data available
- Toxicity to daphnia and other aquatic invertebrates: EC50 - Daphnia magna -  $\leq 4\,335$  mg/L - 48 h.
- Toxicity to algae: EC50 - Desmodesmus subspicatus (previous name: Scenedesmus subspicatus) -  $\leq 1\,199$  mg/L - 72 h.
- Toxicity to microorganisms: no data available

### 12.2 Persistence and degradability

AEROBIC: No data on the aerobic biodegradation of betaine was located however, amphoteric surfactants based on the betaine structure have been shown to be mineralized to a significant extent. For example, C12-C14 alkyl betaine surfactants were shown to be readily biodegradable in 28-day closed bottle screening tests reaching >60% of the theoretical oxygen demand over this period(1,2).

### 12.3 Bioaccumulative potential

An estimated BCF of 0.3 was calculated in fish for betaine(SRC), using a water solubility of 611,000 mg/L at 19.3 deg C(1) and a regression-derived equation(2). According to a classification scheme(3), this BCF suggests the potential for bioconcentration in aquatic organisms is low(SRC), provided the compound is not metabolized by the organism(SRC).

### 12.4 Mobility in soil

The Koc of betaine is estimated as 3(SRC), using a water solubility of 611,000 mg/L at 19.3 deg C(1) and a regression-derived equation(2). According to a classification scheme(3), this estimated Koc value suggests that betaine is expected to have very high mobility in soil. The estimated pKa of betaine, an inner salt, is 2.38(4).

### 12.5 Other adverse effects

no data available

---

## SECTION 13: Disposal considerations

## 13.1 Disposal methods

### Product

The material can be disposed of by removal to a licensed chemical destruction plant or by controlled incineration with flue gas scrubbing. Do not contaminate water, foodstuffs, feed or seed by storage or disposal. Do not discharge to sewer systems.

### Contaminated packaging

Containers can be triply rinsed (or equivalent) and offered for recycling or reconditioning. Alternatively, the packaging can be punctured to make it unusable for other purposes and then be disposed of in a sanitary landfill. Controlled incineration with flue gas scrubbing is possible for combustible packaging materials.
