## SECTION 12: Ecological information

## 12.1 Toxicity

- Toxicity to fish: no data available
- Toxicity to daphnia and other aquatic invertebrates: no data available
- Toxicity to algae: no data available
- Toxicity to microorganisms: no data available

## 12.2 Persistence and degradability

Based on pure culture data, p-terphenyl is expected to be resistant to aerobic biodegradation(SRC). Two bacterial strains of *Alcaligenes* and *Acinetobacter*, enriched on biphenyl or 4-chlorobiphenyl, were unable to utilize p-terphenyl as a sole carbon source during a four week period(1).

## 12.3 Bioaccumulative potential

An estimated BCF value of 5900 was calculated for p-terphenyl(SRC), using a measured water solubility of 0.0179 mg/l(1) and a recommended regression-derived equation(2). According to a recommended classification scheme(3), this BCF value indicates that bioconcentration of p-terphenyl in aquatic organisms is high(SRC).

## 12.4 Mobility in soil

The Koc of p-terphenyl is estimated as approximately 40000(SRC), using an experimental water solubility of 0.0179 mg/l(1) and a regression-derived equation(2,SRC). According to a recommended classification scheme(3), this estimated Koc value suggests that p-terphenyl will be immobile in soil(SRC).

## 12.5 Other adverse effects

no data available

---

# SECTION 13: Disposal considerations

## 13.1 Disposal methods

### Product

The material can be disposed of by removal to a licensed chemical destruction plant or by controlled incineration with flue gas scrubbing. Do not contaminate water, foodstuffs, feed or seed by storage or disposal. Do not discharge to sewer systems.

### Contaminated packaging

Containers can be triply rinsed (or equivalent) and offered for recycling or reconditioning. Alternatively, the packaging can be punctured to make it unusable for other purposes and then be disposed of in a sanitary landfill. Controlled incineration with flue gas scrubbing is possible for combustible packaging materials.
