- Toxicity to microorganisms: EC10 - activated sludge of a predominantly domestic sewage - 240 mg/L - 3 h. Remarks:Respiration rate.

12.2 Persistence and degradability

4-Hydroxyphenylsulfonic acid at a concentration of 75 ug/ml was incubated aerobically with a mixed culture of soil microorganisms for a time period ranging from 3 hours to 64

days. Total loss of this compound, followed by measuring the loss in absorbance of the benzene ring, was complete within 32 days(1). 4-Hydroxyphenylsulfonic acid at a concentration of 100 mg/l was incubated over 14 days with a non-acclimated activated sludge inoculum(2). The degradation ratio of 4-hydroxyphenylsulfonic acid (at 100 mg/l), defined as the BOD/Theoretical BOD, was determined to be 0.76 to 0.78; a lag time of 76-95 hours was measured, total biodegradation of this compound required 190-195 hours including the lag period(2). This indicates that this compound is biodegraded completely over a long time by acclimated microorganisms(2).

12.3 Bioaccumulative potential

A BCF of 0.03 was calculated for 4-hydroxyphenylsulfonic acid, using an estimated log Kow of -1.65(1, SRC) and a recommended regression-derived equation(2, SRC). This BCF value suggests that 4-hydroxyphenylsulfonic acid will not bioconcentrate in aquatic organisms(2).

12.4 Mobility in soil

Based on an estimated log Kow of -1.65(1), the Koc of 4-hydroxyphenylsulfonic acid is estimated as approximately 3.0 using a regression-derived equation(2, SRC). According to a suggested classification scheme, this estimated Koc value suggests that 4-hydroxyphenylsulfonic acid has very high mobility in soil(3).

12.5 Other adverse effects

no data available

SECTION 13: Disposal considerations

13.1 Disposal methods

Product

The material can be disposed of by removal to a licensed chemical destruction plant or by controlled incineration with flue gas scrubbing. Do not contaminate water, foodstuffs, feed or seed by storage or disposal. Do not discharge to sewer systems.

Contaminated packaging

Containers can be triply rinsed (or equivalent) and offered for recycling or reconditioning. Alternatively, the packaging can be punctured to make it unusable for other purposes and then be disposed of in a sanitary landfill. Controlled incineration with flue gas scrubbing is possible for combustible packaging materials.
